

Tura's Application User Guide

How to Insert a marker on the map:

Click on the 'Tell us more' button, then zoom into the map and place a marker. Click on the confirmation dialogue as yes if you want to enter the data, and then after you get the message as 'Proceed further', close the dialogue.

Then go to the enter description button enter the record, update the record and then finally view. After you click on view description button, you find the data displayed on a page. On the same page there are two buttons Report Spam and Have Your Say. On clicking each button you get a form opened and once you fill all the details on the form and click Upload, an email will go to James Sweeney for that particular location. I have changed the location to William Hynes for the testing purpose.

Then click the 'stop' button and the text will change on it to 'Tell Us More'.

Do this for further markers that need to be added on the map.

How to View data for the existing marker on the map:

Click on the existing marker on the map, on the confirmation dialogue that pop up click yes if you want to view or update the data, and then after you get the message as 'Proceed further', close the dialogue.

Then update the record and then finally view. After you click on view description button, you find the data displayed on a page. On the same page there are two buttons Report Spam and Have Your Say. On clicking each button you get a form opened and once you fill all the details on the form and click Upload, an email will go to James

Sweeney for that particular location. I have changed the location to William Hynes for the testing purpose.

How to view the data for the different layers:

Click the checkbox under the layers.

Once the layer is loaded on the map click on the loaded shape. Data about the plots will be displayed below the map .No data will appear for protected Structure. You can even insert a marker on the loaded shape region by repeating for [How to insert insert the marker on the map.](#)
